

PROJECT SCOPE STATEMENT	
Project Name	SPOT
Project Deliverables	Detailed Description
View Results	Users can take photos or upload photos in the application and can see their results. Users will be able to see all the results they had in the past as well. Users can view their old result and can compare with the current result to see if there are any changes or updates that need to be mentioned. Users can also use these results like a log/ journal that they can show to hospitals to ask for a more detailed diagnosis.
Project Exclusions	
This web app will not allow users to detect other kinds of cancer nor other types of skin disease but will detect within the 7 types of skin diseases/ cancer within the trained and tested data of the AI. This project will also not give any direct instructions to users regarding what to do next, instead, it will only recommend the users to take actions based on the AI analyzed result.
